

Want to keep open the possibility of other majors in addition to Chemistry?

Can I keep more than one iron in the fire?

Yes! There are 4 different scenarios:

1. If you have one free slot in first semester and two in second semester for your Chemistry subjects then there are no complications. This applies for:
Mathematics and **Geology**
The Chemistry specialisation of **Biotechnology**
Pharmacology (if you don't want to do Biochemistry in 2nd semester)
2. Transfer of pre-requisites between disciplines. This may apply for
Chemical Systems (satisfactory performance in the practical component of "Chemical Processes and Analysis" will allow you to enrol in 3rd-year Practical Chemistry subjects without "Practical Chemistry").
3. Altering the pattern of Science and Breadth subjects. If you can shift your breadth option from 2nd to 1st semester (or to another year) then you will be able to complete four science options in 2nd semester. This would allow you to leave open the possibility of a Chemistry major with:
Pharmacology (if you also want to do Biochemistry in 2nd semester)
Biochemistry and **Molecular Biology**
Biotechnology
4. You just don't have enough Science options but you can do some of your Maths requirements as a part of a concurrent diploma in Mathematical Science then it will be possible to leave open the possibility of majors in Chemistry and **Physics**

Don't want to major in Chemistry but want to study Chemistry in later years?

Do you only want to do one Chemistry subject at 2nd year level?

Select either "**Reactions and Synthesis**" (CHEM20018, sem. 1) or "**Environmental Chemistry**" (CHEM20011, sem. 1).

Do you only want to do one Chemistry subject at 2nd and 3rd year level?

Select "**Environmental Chemistry**" (sem. 1) then the 3rd-year subject "**Analytical and Environmental Chemistry**".

If you are looking for two lecture subjects then:

"**Reactions and Synthesis**" (sem. 1) and "**Structure and Properties**" (CHEM20020, sem. 2) will allow you to study the 3rd year lecture subjects in Chemistry.

Need further information or still not sure... Speak to us!!!
